WEEK 01 TASK

Course Title: Software Development III: AI-Based Software Project Development

Course Code: CSE 4104

Section: 7D | Spring 2026

Submitted to

Md. Riaz Mahmud

Assistant Professor

Department of Computer Science and Engineering

Northern University of Business and Technology, Khulna

Khulna 9100, Bangladesh

1. Official Team Name

CSE4104-7D-T04

2. Section

7D

3. Project Title

OrbitMind AI– Intelligent Productivity & Study Companion

4. Team Leader Information

Name: Md. Imroz Newaz

Student ID: 11220321052

5. Full Team Member List with IDs

1. **Md. Imroz Newaz** — 11220321052
2. **Fatema Parvin Kanta** — 11230121192
3. **Zeniya Naznin** — 11230121138
4. **Md. Mahfuzur Rahman Hridoy** — 11230121186

6. Preliminary Project Description

Students struggle to manage academic tasks, deadlines, class schedules, and personal responsibilities. Many existing tools are generic and do not understand student-specific study patterns or daily workloads.

Our proposed system, **OrbitMind AI**, is an AI-powered productivity and study assistant designed to help students efficiently organize tasks, plan study sessions, set priorities, and stay consistent with their academic goals.

The system will allow users to:

- Create and categorize tasks
- Plan study sessions
- Track deadlines
- Analyze workload patterns
- Receive AI-based suggestions for better productivity

The project aims to provide a simple, effective, AI-enabled productivity tool tailored for students.

7. Why AI is Needed in This Project

AI adds real value to this system through:

a) Smart Recommendations

AI can analyze user workload, task complexity, and deadlines to recommend:

- Best times to study
- Which task to complete first
- How to break down large assignments

b) Natural Language Understanding

Users can input tasks like:

“Remind me to study chapter 4 tomorrow evening”

AI will interpret and convert it into structured tasks.

c) Quick Summaries & Notes

AI can generate:

- Study summaries
- Recap notes
- Task breakdowns

d) Intelligent Pattern Tracking

AI identifies:

- Study consistency
- Productivity dips
- Overloaded days

These features clearly justify meaningful AI integration as required in Week 01 instructions.

8. Initial Technology Stack

Frontend Options

(Selecting simple stack now; may upgrade later)

- HTML
- CSS
- JavaScript

Backend

- Node.js
- Express.js

Database

- MongoDB / PostgreSQL

AI Tools

- OpenAI API / Gemini API / Grok API

Development Tools

- VS Code
- Git & GitHub
- Postman (API Testing)

9. Similar Existing Systems

a) Google Tasks

Simple task manager but lacks AI-based personalization.

b) Notion AI

Powerful but overwhelming for students and not student-specific.

c) Todolist with AI

Provides basic AI suggestions but lacks study-oriented workflow.

d) StudySmarter

Focused on study planning but not daily life productivity.

e) GitHub Repositories

Several lightweight Node.js productivity tools exist, but none integrate AI-powered study assistance with personalized recommendations.

Our system improves by:

- Combining task management + study planning
- Adding AI-based personalized suggestions
- Offering lightweight, student-focused workflow
- Providing simplicity instead of complexity
